

# SiteWatch

Protecting your assets and team is easier with surveillance cameras. By integrating incident footage with alarm notifications, SiteWatch ensures your operations are always covered - even when you're not on site.

## RESOLVE DISPUTES

Camera footage provides **evidence to resolve disputes** related to theft, vandalism, natural disasters, accidents, property damage, and vendor performance. This footage can be used to support:

- police reports
- insurance claims
- vendor compliance
- reduced insurance premiums (chat with your agent to learn if your site qualifies.)

View **incident footage** with visual inspection of equipment involved with alarm notifications to respond quickly and resolve the situations.

"Being able to monitor this system and seeing when people are coming and going without having someone on location 24/7, that's a tremendous boom. And I think it gives a heck of a lot of comfort to our insurance providers."

**- Infinity Water Solutions CEO, SiteWatch Customer**

## OPERATE REMOTELY

Integrated video surveillance is an invaluable tool for efficient, effective remote operations to proactively respond to activity. Access **live feed** or **time-lapse history** anytime, anywhere on our mobile app or web browser. Leave your site knowing you are covered with visual observation for operational awareness.

## ACHIEVE HSE OBJECTIVES

Surveillance is essential to meet Health, Safety, and Environment (HSE) objectives while mitigating risks related to unauthorized access, theft, and vandalism. SitePro users report up to **70% fewer trips to site** when they can remotely view alarm-integrated camera footage, monitor and control equipment.
